

METHOD FOR MOUNTING A REMOVABLE
DECORATIVE DEVICE ON A WALL

ABSTRACT

5 A desired fabric pattern is glued to a top surface of a
polymeric crease resistant backing material and a threaded
outline of the pattern is stitched to the backing material.
The design pattern is cut away from the backing material not
covered by the threaded outline and double sided sticky tape is
applied to a back surface of the backing material so that the
10 design pattern can be removably applied to a wall surface.
